

Sumavision SDM2.0-X - High Quality H.265/H.264/MPEG2 4K HD Transcoding

Product Introduction

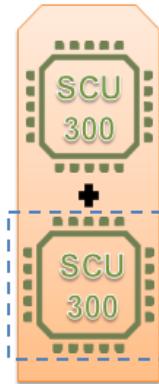

Based on SDM2.0 video processing platform, Sumavision release the new ASIC solution of transcoding that support HEVC/AVC UHD/HD format ---SCU300. The SDM platform is an ideal solution for transcoding and cluster management of SD, HD and UHD video through SCU200+SCU300 package. The converter also supports complex encapsulation applications for the delivery of both broadcast and next-generation multiscreen services with Sumavision's Media Gateway and Cluster Management

SCU300 module consists of transcoding streaming processing, streaming media gateway (xStream2300) and cluster management control system (xManager2000), and it can choose multiple devices to achieve encoding and transcoding function to multichannel video and audio or live stream according to the actual needs
